Subject:An Opinion to Constitutional Affairs Bureau

Move To: (Choose Folder)

Dear the Constitutional Affairs Bureau,

I think the way in electing members for Legislation Council has been
acceptable. If we look at the election on 9.12, the election system was OK.
The remaining problems are on implementation. So far, all complain are on
the implementation of the election process.

To improve it, government may employ an electronic system to replace most of
human work. This electronic system should work with the e-Cert supported by
HK Post Office. You may consult the Department of Computer Science in HKUST,
esp. Prof. Ding & Prof. Chanson. They have done some research on electronic
voting system.

Concerning election on Chief Executive of HK SAR Government, it should need
more ballots than two third of Hong Kong citizen. However, such demand may
not be achievable. Anyway, the first step is to generate a valid list for
ballot. This list should be generated by Legislation Council and National
People Congress such that the list would be approved by Central Government.
Then, if the ballot cannot achieve two third, the top two candidate will be
reselected.

Finally, HK SAR Government should import some modern management skill with
minimum modification on existing Bureaucracy. For example, management on
diverse workforce is focus on the formation of a company with staffs from
different culture, ethnic, genders etc. In order to stabilize the operation
of HK SAR Government, he has to set up a higher goal, which is beyond
democracy and human right. For example, it may be for contribution to the
Great China and sharing his prosperity. With an effective managed
government, HK citizen can re-established the trust with the government. Of
course, this would happen in parallel with the change of political culture
in Hong Kong and China.

Regards,
Horace
